Re: C-Tech's updated *Introduction To Network Cabling — Copper-Based Systems Curriculum*

To Whom It May Concern:

The undersigned C-Tech Program Recognizers wanted to take this opportunity to inform you of a very important step that C-Tech has taken to support the growing needs of Information Transport Systems Industry. The ITS industry needs installers to install the systems and infrastructure that transport information — audio, video, voice, data, electronic safety and security, environmental and building controls— from point A to point Z.

C-Tech has been providing state-of-the-art curriculum and innovative training aids to support this industry since 1995. The company's programs in Copper and Fiber Optic Cabling Installation, Testing and Troubleshooting as well as Telephony Programming, Installation and Maintenance have been building a solid labor force for our industry.

Now, C-Tech is taking another step with the release of their latest Copper-Based Systems (version 3.3) program. Below is a partial list of topics covered in this much-needed program:

- Category 6 Cabling
- Class F (Proposed Category 7 Cabling)
- Enhanced Testing and Troubleshooting
- Residential Applications
- Firestopping
- Grounding and Bonding
- Media Conversion
- BIX and Krone IDC Terminations
- Wireless Applications
- Network Overview

As technologies of audio, video, voice, data, electronic safety and security, environmental and building controls converge, there is a growing need for trained technicians. We are proud to support and recognize the training programs and certifications — *Network Cabling Specialist* and *Voice Communication Professional* — offered by C-Tech.

We encourage you to make these essential programs available to your students.
